SUMMARY

Engineering student in Computer Science, Networks & Telecommunications at IMT Atlantique (apprenticeship track). Designs and automates cloud and network infrastructure: Terraform, Ansible, Docker and AWS in production on a co-founded product, Ansible automation of network equipment at SPIE ICS. Seeking a 12-week DevOps, cloud or MLOps internship abroad, in any country, from mid-May 2027.

EXPERIENCE & PROJECTS

SPIE ICS — Infrastructure Architect, Apprentice Sep 2025 – Present

Lille, France — work-study apprenticeship alternating school and company

- Automated the configuration of about 20 Aruba AOS-CX switches in production at a hospital using Ansible and the aoscx collection: VLANs, LAGs, stacking and software version inventory.
- Wrote the network inventory once (1.5 hours); VLAN rollout across all switches now takes 5 minutes and software version audits 2 minutes, with consistent, repeatable configuration.
- Designed the architecture and pricing for a major-account RFP (firewall cluster, ZTNA VPN, datacenter); gathered and qualified client requirements.
- Scoped and priced two migrations: Extreme Networks to Aruba and Fortinet for a hospital, Check Point to Fortinet for a county council.
- Brought a network into production and deployed a NAC virtual machine on Nutanix for a municipal client.

Local Camera Assistant — Personal project Sep 2026 – Present

github.com/Aymiut/local-vision-assistant

- Built a webcam assistant: a local vision model (Gemma, MLX) describes the feed every 10 seconds, with no cloud service.
- Streamed the camera over RTSP via MediaMTX to a Python container that sends frames to a FastAPI service.
- Set up GitHub Actions CI on every push: image build, Trivy scan failing on fixable critical vulnerabilities, publication to GHCR.
- Kept the model outside Docker, since the Linux VM of Docker Desktop has no GPU access; the API listens on 127.0.0.1 only.

HardenThis — Co-founder, Head of Infrastructure 2025 – 2026

Blue Team cybersecurity training platform (project discontinued)

- Co-designed the production AWS infrastructure: VPC, ECS Fargate, ECR, IAM, NAT Gateway; managed as code with Terraform, using LocalStack for development environments.
- Built GitLab CI pipelines for build, test and deployment of a Next.js, Prisma and PostgreSQL application with Stripe integration.
- Led a FinOps migration of the website from AWS to a VPS, cutting monthly cost from about \$140 to \$35 (AWS list prices).
- Isolated lab networks with no internet egress, image pulls and logs through private VPC endpoints, and zero-permission IAM roles; set up daily PostgreSQL backups to S3 with tested restores.
- Designed a DNS hardening lab on BIND (open resolver, TSIG, DNSSEC, rate limiting), with an EC2 image built with Packer and validation through real DNS queries.

L2EP Research Laboratory — Systems Administrator Intern (Ansible, Bash, Docker)

Apr 2025 – Jul 2025

EDUCATION

IMT Atlantique — Brest, France

Sep 2026 – Expected Sep 2029

Master of Engineering (Diplôme d'Ingénieur), Computer Science, Networks & Telecommunications — apprenticeship track

Université de Lille — Villeneuve-d'Ascq, France

Sep 2023 – Jun 2026

Bachelor of Technology (BUT) in Computer Science — Networks & Security track

SKILLS, CERTIFICATION & LANGUAGES

Cloud & IaC: AWS (VPC, ECS Fargate, ECR, IAM, NAT Gateway), GCP, Terraform, Ansible, Packer, LocalStack

CI/CD & Containers: GitLab CI, GitHub Actions, Git, Docker, Docker Compose, Podman, Kubernetes

Systems: Linux, Icinga, Cacti, EVE-NG, Nutanix

Networking: LAN/WAN, BGP, OSPF, SD-WAN, VLAN, LACP, DNS, DHCP, LDAP, SNMP, Aruba AOS-CX

Security: Firewalls, ZTNA VPN, NAC, IAM, system hardening, image scanning (Trivy), SPF/DKIM/DMARC, penetration testing

Development: Python, FastAPI, Bash, SQL, REST APIs, Java/J2EE, Next.js, Prisma, PostgreSQL

Certification: HornetSecurity Certified Engineer — email security (SPF, DKIM, DMARC, Microsoft 365)

Languages: French (native), English (B2, TOEIC 895/990), Spanish (B1)
